UK 7501 - Installation guide for technical personnel.

FR 7501 - Guide d'installation pour le personnel qualifié.

DE 7501 Installationsanleitung für Techniker.

DK

ADVARSEL

Modulet må kun tilsluttes af kvalificerede teknikere, som er bekendte med de tekniske udtryk, advarsler og instruktioner i installationsvejledningen, og som vil følge disse.

Hvis der er tvivl om modulets rette håndtering, skal der rettes henvendelse til den lokale forhandler eller alternativt direkte til **PR electronics A/S.**

Installation og tilslutning af modulet skal følge landets gældende regler for installation af elektrisk materiel.

Udskiftning af komponenter kan forringe egensikkerheden.

Reparation af modulet må kun foretages af PR electronics A/S.

Transmitterdækslet må ikke fjernes i eksplosionsfarligt område, når kredsløbet er strømførende.

Transmitterdækslet skal være helt lukket for at overholde kravene til eksplosionssikring.

Hvis transmitteren er installeret i områder med kraftige vibrationer, kan det være nødvendigt med ekstra befæstning.

Ved installation i eksplosionsfarligt område skal den tilhørende installationstegning følges nøje.

Vær opmærksom på ikke at frembringe mekaniske gnister, når instrumentet og tilhørende enheder tilgås i eksplosionsfarligt område.

Elektriske specifikationer

Anvendelsestemperatur	
med silikone O-ring	-40°C til +85°C
med FKM O-ring	-20°C til +85°
Reduceret LCD-ydeevne under -20°C og over +70 °C	
Opbevaringstemperatur	-40°C til +85°C
Kalibreringstemperatur	20...28°C
Relativ luftfugtighed	0...100% RF (kond.)
Kapslingsklasse	IP54 / IP66 / IP68 type 4X

Mekaniske specifikationer

Diameter	Ø 110 mm
Mål, H x B x D	109x145x125,5 mm
Vægt, ca.	1,3 kg
Ledningskvadrat	0,13...1,5 mm² / AWG 26...16 flerkoret ledning
Klemskruetilspændingsmoment	0,4 Nm
Vibration	IEC 60068-2-6 : 2007
2...25 Hz	±1,6 mm
25...100 Hz	±4 g

Fælles specifikationer:

Forsyningsspænding, DC	
Ex: ia, egensikker	10...30 VDC (12...30 VDC med baggrundsbelysning)
Øvrige	10...35 VDC (12...35 VDC med baggrundsbelysning)
Isolationsspænd., test/oper.	1,5 kVAC / 50 VAC
Langtidsstabilitet	0,1% af span / år

Indgangsspecifikationer:

Indgang for RTD-typer:

Pt50, Pt100, Pt200, Pt500, Pt1000, Ni50, Ni100, Ni120, Ni1000

Kabelmodstand pr. leder (max.)	5 Ω
Følerstrøm	Nom. 0,2 mA

Indgang for TC-typer:

B, E, J, K, L, N, R, S, T, U, W3, W5, Lr

mV-indgang:

Måleområde, spænding	-800...+800 mV
Min. span	2,5 mV
Indgangsmodstand	10 MΩ

Strømudgang:

Signalområde	4...20 mA
Min. signalområde	16 mA
Belastningsmodstand	≤ (Vforsyn. - 10) / 0,023 [Ω]
med baggrundsbelysning	≤ (Vforsyn. - 12) / 0,023 [Ω]
Følerfejlsdetektering, programmerbar	3,5...23 mA
NAMUR NE43 Upscale	23 mA
NAMUR NE43 Downscale	3,5 mA
HART-protolkolrevisioner	HART 7 og HART 5

Overholdte myndighedskrav:

EMC	2014/30/EU
ATEX	2014/34/EU
RoHS	2011/65/EU
EAC	TR-CU 020/2011

WARNING

Only technicians, who are familiar with the technical terms, warnings, and instructions in the manual and who are able to follow these, should connect the device.

Should there be any doubt as to the correct handling of the device, please contact your local distributor or PR electronics A/S.

Mounting and connection of the device should comply with national legislation for mounting of electric materials.

Substitution of components may impair intrinsic safety.

Repair of the device must be done by PR electronics A/S only.

Do not remove the transmitter cover in explosive atmospheres when the circuit is alive.

The transmitter cover must be fully engaged to meet the explosion proof requirements.

If installed under high-vibration conditions, the transmitter may require supplementary support.

For installation in hazardous area the corresponding installation drawing must be followed in detail.

Take care not to generate mechanical sparking when accessing the instrument and peripheral devices in a hazardous location.

Electrical specifications

Operating tempeature	
with silicone O-ring	-40°C to +85°C
with FKM O-ring	-20°C to +85°C
Reduced LCD performance below -20°C and above +70°C	
Storage temperature	-40°C to +85°C
Calibration temperature	20...28°C
Relative humidity	0...100% RH (cond.)
Protection degree	IP54 / IP66 / IP68 type 4X

Mechanical specifications:

Dimensions	Ø 110 mm
Dimensions, H x W x D	109x145x125.5 mm
Weight approx.	1.3 kg
Wire size	0.13...1.5 mm² / AWG 26...16 stranded wire
Screw terminal torque	0.4 Nm
Vibration	IEC 60068-2-6 : 2007
2...25 Hz	±1.6 mm
25...100 Hz	±4 g

Common electrical specifications:

Supply voltage, DC:	
Ex ia, intrinsically safe	10...30 VDC (12...30 VDC with backlight)
Other	10...35 VDC (12...35 VDC with backlight)
Isolation - test / working	1.5 kVAC / 50 VAC
Long term stability	0.1% of span / year

Input specifications:

RTD input types:

Pt50, Pt100, Pt200, Pt500, Pt1000, Ni50, Ni100, Ni120, Ni1000

Cable resistance per wire (max.)	5 Ω
Sensor current	Nom. 0.2 mA

TC input types:

B, E, J, K, L, N, R, S, T, U, W3, W5, Lr

mV input:

Voltage input range	-800...+800 mV
Min. span	2.5 mV
Input resistance	10 MΩ

Output specifications:

Signal range	4...20 mA
Min. signal range	16 mA
Load resistance	≤ (Vsupply - 10) / 0.023 [Ω]
with backlight	≤ (Vsupply - 12) / 0.023 [Ω]
Sensor error detection, programmable	3.5...23 mA
NAMUR NE43 Upscale	23 mA
NAMUR NE43 Downscale	3.5 mA
HART protocol revisions	HART 7 and HART 5

Observed authority requirements:

EMC	2014/30/EU
ATEX	2014/34/EU
RoHS	2011/65/EU
EAC	TR-CU 020/2011

FR

AVERTISSEMENT

Il est conseillé de réserver le raccordement du module aux techniciens qualifiés qui connaissent les termes techniques, les avertissements et les instructions de ce guide et qui sont capables d'appliquer ces dernières.

Si vous avez un doute quelconque quant à la manipulation du module, veuillez contacter votre distributeur local. Vous pouvez également vous adresser à PR electronics SARL.

Le montage et le raccordement du module doivent être conformes à la législation nationale en vigueur pour le montage de matériaux électriques.

La substitution de composants peut compromettre la sécurité intrinsèque.

Seule PR electronics SARL est autorisée à réparer le module.

Ne retirez pas le couvercle du transmetteur en atmosphère explosive lorsque l'appareil est sous tension.

Le couvercle du transmetteur doit être serré à fond pour être conforme aux exigences d'antidéflagrance.

Dans le cas où le transmetteur est exposé à des fortes vibrations, il peut être nécessaire d'installer un soutien supplémentaire.

Pour l'installation dans les atmosphères explosives, le schéma d'installation correspondant doit être suivi en détail.

Prenez soin de ne pas générer des étincelles mécaniques lors de l'accès à l'appareil et instruments périphériques dans une atmosphère explosive.

Spécifications

Plage d'utilisation	
avec joint en silicone	-40°C à +85°C
avec joint en FKM	-20°C à +85°C
Performance LCD réduit au dessous de -20°C et au dessus de + 70°C	
Température de stockage	-40°C à +85°C
Température de calibration	20...28°C
Humidité relative	0...100% HR (cond.)
Degré de protection	IP54 / IP66 / IP68 type 4X

Spécifications mécaniques :

Diamètre	Ø 110 mm
Dimensions, H x L x P	109x145x125,5 mm
Poids, env.	1,3 kg
Taille des fils	0,13...1,5 mm² / AWG 26...16 fil multibrins
Pression max. avant déformation de la vis	0,4 Nm
Vibration	IEC 60068-2-6 : 2007
2...25 Hz	±1.6 mm
25...100 Hz	±4 g

Spécifications communes :

Tension d'alimentation, cc :	
Ex ia, intrinsèquement sûr	10...30 Vcc (12...30 Vcc avec rétro-éclairage)
Autres	10...35 Vcc (12...35 Vcc avec rétro-éclairage)
Tension d'iso. test/opér.	1,5 kVca / 50 Vca
Stabilité à long terme	0,1% de l'EC / an

Spécifications d'entrée :

Entrée pour types RTD :

Pt50, Pt100, Pt200, Pt500, Pt1000, Ni50, Ni100, Ni120, Ni1000

Résistance de ligne max. par fil	5 Ω
Courant de sonde	nom. 0,2 mA

Entrée pour types TC :

B, E, J, K, L, N, R, S, T, U, W3, W5, Lr

Entrée mV :

Gamme de mesure, tension.	-800...+800 mV
Plage de mesure min.	2,5 mV
Résistance d'entrée	10 MΩ

Sortie courant :

Gamme de signal	4...20 mA
Plage de signal min.	16 mA
Résistance de charge	≤ (Valim. - 10) / 0,023 [Ω]
avec rétro-éclairage	≤ (Valim. - 12) / 0,023 [Ω]
Détection de rupture de sonde, programmable	3,5...23 mA
NAMUR NE43 Haut d'échelle	23 mA
NAMUR NE43 Bas d'échelle	3,5 mA
Protocoles HART	HART 7 et HART 5

Compatibilité avec les normes :

CEM	2014/30/UE
ATEX	2014/34/UE
RoHS	2011/65/UE
EAC	TR-CU 020/2011

DE

WARNUNG

Das Gerät darf nur von qualifizierten Technikern angeschlossen werden, die mit den technischen Ausdrücken, Warnungen und Anweisungen in dieser Installationsanleitung vertraut sind und diese befolgen.

Sollten Zweifel bezüglich der richtigen Handhabung des Gerätes bestehen, sollte man mit dem Händler vor Ort Kontakt aufnehmen. Sie können aber auch direkt mit PR electronics GmbH Kontakt aufnehmen.

Die Installation und der Anschluss des Gerätes haben in Übereinstimmung mit den geltenden Regeln des jeweiligen Landes bez. der Installation elektrischer Apparaturen zu erfolgen.

Austausch von Komponenten kann die Eigensicherheit beeinträchtigen.

Reparaturen des Gerätes dürfen nur von PR electronics A/S vorgenommen werden.

In explosionsgefährdeten Atmosphären den Deckel nicht abnehmen, wenn der Stromkreis unter Spannung steht.

Der Gehäusedeckel muss vollständig geschlossen sein, um die Ex-Schutz-Anforderungen zu erfüllen.

Bei der Installation in Bereichen mit starken Schwingungen, kann das Gerät zusätzliche Unterstützung benötigen.

Bei der Installation in explosionsgefährdeten Bereichen muss die entsprechende Installationszeichnung im Detail beachtet werden.

Vermeiden Sie bei der Arbeit am Gerät und dessen Peripheriegeräte in explosionsgefährdeten Bereichen Funkenbildung durch mechanische Einwirkungen.

Elektrische Daten

Anwendungstemperatur

7501 ATEX Installation

For safe installation of 7501 the following must be observed. The module shall only be installed by qualified personnel who are familiar with the national and international laws, directives and standards (EN60079-14) that apply to this area.
Year of manufacture can be taken from the first two digits in the serial number.

Ex ia installation:

ATEX Certificate DEKRA 15ATEX0058 X

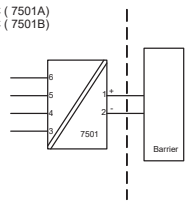
Marking
II 1 G Ex ia IIC T6...T4 Ga
II 1 D Ex ia IIIC T100°C Da
I M1 Ex ia I Ma (7501B)

Standards: EN 60079-0: 2012, EN 60079-11: 2012

Hazardous area
Zone 0, 1, 2, 20, 21, 22, (Mines)

Non Hazardous Area

T4: -40 ≤ Ta ≤ 85ºC T100 ºC (7501A)
T4: -40 ≤ Ta ≤ 80ºC T100 ºC (7501B)
T5: -40 ≤ Ta ≤ 60ºC T75 ºC
T6: -40 ≤ Ta ≤ 45ºC T60 ºC



Sensor
Terminal: 3,4,5,6
Uo: 9.6 VDC
Io: 28 mA
Po: 67 mW
Lo: 35 mH
Co: 3.5 µF

Supply
Terminal: 1,2
Ui: 30 VDC
Ii: 120 mA
Pi: 0.84 W
Li: 0 µH
Ci: 2 nF

Ex nA, ic installation:

For an ambient temperature exceeding 70 °C, heat resistant cables and cable glands suitable for at least 90°C shall be used.

If the transmitter is physically connected to a possible source of heating or cooling, e.g. by mounting to a process pipe or a temperature sensor, the temperature at the point of connection shall be within the ambient temperature range as given in the certificate.

Cable entries and blanking elements shall be used that are suitable for the application and correctly installed.

The enclosure must be connected to the potential matching line

Applied screw terminal torque is max 0.4 Nm on all terminals.

Protection degree of IP 54 according to EN 60529 is achieved if certified cable glands or conduit entry devices are used that are suitable for the application and correctly installed.

Protection degree of IP 68 according to EN 60529 is only achieved if certified cable glands or conduit entry devices are used that are suitable for the threads of the sensor, blanking elements and cable glands.

For group III (dust), electrostatic charging of the paint layer shall be avoided

7501 CSA Installation

For safe installation of 7501 the following must be observed. The module shall only be installed by qualified personnel who are familiar with the national and international laws, directives and standards that apply to this area.

Intrinsic Safe Installation / SÉCURITÉ INTRINSÉQUE , Exia
Applicable for (7501A…. and 7501B….).

Hazardous classified Location
Class I,Division1, Groups, ABCD;
Class II,Group EFG;
Class III, Division 1.
Class I, Zone 0, IIC

UM < 250V
Voc or Uo < Vmax or Ui
Isc or Io < Imax or Ii
Po < Pi
Ca or Co > Ci + Ccable
La or Lo > Li + Lcable

Warning
Substitution of components may impair intrinsic safety.

AVERTISSEMENT
LA SUBSTITUTION DE COMPOSANTS PEUT COMPROMETTRE LA SÉCURITÉ INTRINSÉQUE

The module must be installed according to the installation codes stipulated in the Canadian Electrical Code (CEC) or for US the National Electrical Code (NEC).

Ex ia installation
General installation instructions
The sensor circuit is not infallibly galvanic isolated from the supply output circuit. However, the galvanic isolation between the circuits is capable of withstanding a test voltage of 500Vac during 1 minute.

The enclosure must be connected to the potential matching line

If the transmitter is physically connected to a possible source of heating or cooling, e.g. by mounting to a process pipe or a temperature sensor, the temperature at the point of connection shall be within the ambient temperature range as given in the certificate or this manual.

Cable entries and blanking elements shall be used that are suitable for the application and correctly installed.

For installalation of 7501A in zone 0 / EPL Ga, the transmitter must be installed such, that even in the event of rare incidents, ignition sources due to impact and friction, sparks are excluded.

Protection degree of IP 54 according to EN 60529 is achieved if certified cable glands or conduit entry devices are used that are suitable for the application and correctly installed.

Protection degree of IP 68 according to EN 60529 is only achieved if certified cable glands or conduit entry devices are used that are suitable for the threads of the sensor, blanking elements and cable glands.

For group III (dust), electrostatic charging of the paint layer shall be avoided

Ex d, tb installation:

The transmitter is intended, either to be connected via a cable, or to be mounted directly onto a temperature sensing probe.
Only ATEX/IECEx equipment certified sensors, suitable for the application and correctly installed, may be mounted directly onto the Transmitter without additional certification of the combination.

If the transmitter is physically connected to a possible source of heating or cooling, e.g. by mounting to a process pipe or a temperature sensor, the temperature at the point of connection shall be within the ambient temperature range as given in the certificate. The sensor shall be suitable for use as entry device on an Ex d enclosure and shall not add volume to the 7501 enclosure. The thread of the sensor must be in compliance with EN60079-1 / EN60079-31.

Unused cable entries must be sealed by the blanking elements 8550-xxx and 8551-xxx supplied with the 7501 or other Ex d and/or Ex tb certified blanking elements suitable for the application. .

Only Ex d and/or Ex tb certified cable and cable glands shall be used that are suitable for the application and correctly installed.

Protection degree of IP 54 according to EN 60529 is achieved if Ex d certified cable glands or conduit entry devices are used that are suitable for the application and correctly installed.

Protection degree of IP 68 according to EN 60529 is only achieved if Ex d certified cable glands or conduit entry devices are used that are suitable for the application and correctly installed with sealing washers or Loctite sealant added to the threads of the sensor, blanking elements and cable glands.

The display cover must be screwed all the way in and the safety catch must be fastened before putting into service. Do not open display cover until 30 minutes after disconnecting power to the equipment allowing internal capacitors to discharge, or do not open display cover unless area is known to be safe

For an ambient temperature exceeding 70 °C, heat resistant cables and cable glands suitable for at least 90°C shall be used.

The enclosure must be connected to the potential matching line.

When the process temperature range exceeds the service temperature range it shall be verified by on-site temperature measurements, taking the worst case conditions into account, that the service temperature does not exceed the range of the module.

For group III (dust), electrostatic charging of the paint layer shall be avoided

No modification to the enclosure is allowed by the customer except as mentioned in the manual or installation drawing.

Explosion proof / Dust ignition proof installation:
Applicable for (7501A)

Conduit and sensor connections must be in NPT modified threads.

Only third party certified sensors suitable for Class I, Division 1, Groups ABCDEFG or Class I ,Zone 1 IIC may be attached to the Temperature Transmitter without additional approval of the combination.

For Class I Group A installation and Class I Zone 1 installation, conduit seal is required within 18 inches of enclosure.

For an ambient temperature exceeding 70°C, heat resistant cables and cables suitable for at least 90°C shall be used.

The display cover must be screwed all the way in and the safety catch must be fastened before putting the module into service.
Do not open / remove front cover unless area is known to be safe.

The remote temperature sensor must comply with the requirements for installation in hazardous locations “Class I, Division 1 / Zone 1, Groups ABCD / IIC”

The remote temperature sensor must comply with the requirements for Ex d installation

Only certified cable and cable glands shall be used that are suitable for the application and correctly installed.

For protection according to Type 4X / IP66 use Loctite 577 on threads of sensor and cable glands.

The enclosure must be connected to the potential matching line

Unused cable entries must be sealed by the blanking elements supplied with the 7501 or other Ex certified blanking elements.

If the transmitter is physically connected to a possible source of heating or cooling, e.g. by mounting to a process pipe or a temperature sensor, the temperature at the point of connection shall be within the ambient temperature range as given in the certificate.

When the process temperature range exceeds the service temperature range it shall be verified by on-site temperature measurements, taking the worst case conditions into account, that the service temperature does not exceed the range of the module.

For Class II, III, electrostatic charging of the paint layer shall be avoided.

No modification to the enclosure is allowed by the customer except as mentioned in the manual or installation drawing.

7501 IECEx Installation

For safe installation of 7501 the following must be observed. The module shall only be installed by qualified personnel who are familiar with the national and international laws, directives and standards (IEC60079-14) that apply to this area.
Year of manufacture can be taken from the first two digits in the serial number.

Ex ia installation:

Ex ia installation

General installation instructions
The sensor circuit is not infallibly galvanic isolated from the supply output circuit. However, the galvanic isolation between the circuits is capable of withstanding a test voltage of 500Vac during 1 minute.

The enclosure must be connected to the potential matching line.

If the transmitter is physically connected to a possible source of heating or cooling, e.g. by mounting to a process pipe or a temperature sensor, the temperature at the point of connection shall be within the ambient temperature range as given in the certificate or in this manual.

Cable entries and blanking elements shall be used that are suitable for the application and correctly installed.

For installalation of 7501A in zone 0 / EPL Ga, the transmitter must be installed such, that even in the event of rare incidents, ignition sources due to impact and friction, sparks are excluded.

Protection degree of IP 54 according to IEC 60529 is achieved if certified cable glands or conduit entry devices are used that are suitable for the application and correctly installed.

Protection degree of IP 68 according to IEC 60529 is only achieved if certified cable glands or conduit entry devices are used that are suitable for the threads of the sensor, blanking elements and cable glands.

For group III (dust), electrostatic charging of the paint layer shall be avoided.

Ex d, tb installation

The transmitter is intended, either to be connected via a cable, or to be mounted directly onto a temperature sensing probe.
Only IECEx equipment certified sensors, suitable for the application and correctly installed, may be mounted directly onto the Transmitter without additional certification of the combination.

If the transmitter is physically connected to a possible source of heating or cooling, e.g. by mounting to a process pipe or a temperature sensor, the temperature at the point of connection shall be within the ambient temperature range as given in the certificate. The sensor shall be suitable for use as entry device on an Ex d enclosure and shall not add volume to the 7501 enclosure. The thread of the sensor must be in compliance with IEC60079-1/IEC60079-31

Unused cable entries must be sealed by the blanking elements 8550-xxx and 8551-xxx supplied with the 7501 or other Ex d and/or Ex tb certified blanking elements suitable for the application.

Only Ex d and/or Ex tb certified cable and cable glands shall be used that are suitable for the application and correctly installed.

Protection degree of IP 54 according to IEC 60529 is achieved if Ex d certified cable glands or conduit entry devices are used that are suitable for the application and correctly installed.

Protection degree of IP 68 according to IEC 60529 is only achieved if Ex d certified cable glands or conduit entry devices are used that are suitable for the application and correctly installed with sealing washers or Loctite sealant added to the threads of the sensor, blanking elements and cable glands.

The display cover must be screwed all the way in and the safety catch must be fastened before putting into service. Do not open display cover until 30 minutes after disconnecting power to the equipment allowing internal capacitors to discharge, or do not open display cover unless area is known to be safe

For an ambient temperature exceeding 70 °C, heat resistant cables and cable glands suitable for at least 90°C shall be used.

The enclosure must be connected to the potential matching line.

When the process temperature range exceeds the service temperature range it shall be verified by on-site temperature measurements, taking the worst case conditions into account, that the service temperature does not exceed the range of the module.

For group III (dust), electrostatic charging of the paint layer shall be avoided

No modification to the enclosure is allowed by the customer except as mentioned in the manual or installation drawing.

FM Installation drawing 7501

For safe installation of 7501 the following must be observed. The module shall only be installed by qualified personnel who are familiar with the national and international laws, directives and standards that apply to this area.

Pour une mise en œuvre du 7501 en toute sécurité, les préconisations ci-dessous doivent être observées. Le module doit être mis en œuvre par du personnel qualifié familier avec les Lois, Directives et Normes, nationales et internationales, qui s'appliquent à la zone d'installation.

La or Lo > Li + Lcable

The entity concept

The Transmitter must be installed according to National Electrical Code (ANSI-NFPA 70) and shall be installed with the enclosure, mounting, and spacing segregation requirement of the ultimate application.

Equipment that is FM-approved for intrinsic safety may be connected to barriers based on the ENTITY CONCEPT. This concept permits interconnection of approved transmitters, meters and other devices in combinations which have not been specifically examined by FM, provided that the agency's criteria are met. The combination is then intrinsically safe, if the entity concept is acceptable to the authority having jurisdiction over the installation.

The entity concept criteria are as follows:

The intrinsically safe devices, other than barriers, must not be a source of power.
The maximum voltage Ui(V_{MAX}) and current Ii(I_{MAX}), and maximum power Pi(Pmax), which the device can receive and remain intrinsically safe, must be equal to or greater than the voltage (Uo or V_{OC} or V_t) and current (Io or I_{SC} or I_t) and the power Po which can be delivered by the barrier.

The sum of the maximum unprotected capacitance (C_i) for each intrinsically device and the interconnecting wiring must be less than the capacitance (C_a) which can be safely connected to the barrier.

The sum of the maximum unprotected inductance (L_i) for each intrinsically device and the interconnecting wiring must be less than the inductance (L_a) which can be safely connected to the barrier.

The entity parameters Uo,V_{OC} or V_t and Io,I_{SC} or I_t, and C_a and L_a for barriers are provided by the barrier manufacturer.

For Class II and Class III installations where rigid conduit is not used, seal cable entries against dust and fibres using a NRTL listed cable gland fitting.

Non Incendive installation:

O-ring Sealings
Silicone rubber:-40°C ≤Ta ≤ +85°C
FKM rubber: -20°C ≤Ta ≤ +85°C

Protection: Indoor and Outdoor Type 4X or IP66

Explosion proof / Dust ignition proof installation

The enclosure must be installed such, that even in the event of rare incidents, ignition sources due to impact and friction, sparks are excluded.

Unused cable entries must be sealed by approved sealing plugs.

Certified cable and cable glands shall be used that are suitable for the application and correctly installed or the cables must be run in conduit.

For an ambient temperature exceeding 70 °C, heat resistant cables and cable glands suitable for at least 90°C shall be used.

For process temperatures above 85°C or below -20/-40°C installer must verify by measurements that the service temperature of the 7501 module is held within this range taking worst conditions into account.

The display cover must be screwed all the way in and the safety catch must be fastened before operation.

Protection degree of IP 66 or TYPE4X is only achieved if certified cable glands or conduit entry devices are used that are suitable for the application and correctly installed with sealing washers or Loctite sealant is added to the threads of the sensor, blanking elements and cable glands.

The enclosure must be connected to the potential matching line.

Warning.
Do not open display cover unless area is known to be safe.

For installation in Canada the following must be taken into account:
All openings for conduit and sensor connection must be in NPT threads.
For Class I Group A installation, conduit seal is required within 18 inches of the enclosure.
For Class I Zone I installation, conduit seal is required within 18 inches of the enclosure.

Attention.
Ne pas ouvrir le couvercle de l'afficheur tant que la zone n'est pas réputée non explosible.

Pour une mise en œuvre au Canada, les préconisations ci-dessous doivent être observées :
Toutes les ouvertures d'entrée process et connexion de capteur doivent être munies de filetage NPT.
Pour une mise en œuvre en Classe I, Groupe A, des joints d'étanchéité doivent être mises en place à moins de 18 pouces du boîtier.
Pour une mise en œuvre en Classe I, Zone I, des joints d'étanchéité doivent être mises en place à moins de 18 pouces du boîtier.

7501 Desenho de Instalação INMETRO

Para instalação segura do 7501 o seguinte deve ser observado. O módulo deve ser instalado, apenas por pessoas qualificadas as quais estão familiarizadas com as normas nacionais e internacionais, diretrizes e padrões (IEC60079-14) que se aplicam a esta área.

Instalação do Ex ia

Instruções de instalação gerais
O circuito do sensor não é infalivelmente galvânico-isolado do circuito de saída de alimentação. Contudo, a isolação galvânica entre os circuitos é capaz de resistir a teste de tensão de 500Vac durante 1 minuto.

O equipamento deve ser conectado à linha potencial correspondente

Se o transmissor estiver fisicamente conectado a uma possível fonte de calor ou resfriamento, por exemplo, através da montagem de um tubo de processo ou sensor de temperatura, a temperatura no ponto de conexão deve estar entre a faixa de temperatura ambiente determinada no certificado ou neste manual.

As entradas dos cabos e elementos de supressão devem ser usadas adequadamente para aplicação INMETRO, aprovada e instalada corretamente.

Para instalação 7501A em zona 0 / EPL Ga, se aplicam as seguintes instruções:
O transmissor deve ser instalado de modo que, mesmo em um evento raro de incidente, fontes de ignição devido a impactos e fricção, faíscas sejam evitadas.

O grau de proteção do IP 54 de acordo com a IEC 60529 é alcançado se o certificado prensa-cabos ou dispositivos de entrada de conduíte são usados e adequados para a aplicação e instalados corretamente.

O grau de proteção do IP 68 de acordo com a IEC 60529 é apenas alcançado se o certificado prensa-cabos ou dispositivos de entrada de conduíte são usados e adequados para aplicação e instalados corretamente com selos de vedação ou selante Loctite adicionados para as linhas do sensor, elementos de supressão e prensa-cabos.

Cuidado
Cuidados especiais devem ser tomados para evitar o acúmulo de carga eletrostática no equipamento devido ao repetitivo processo de carregamento, por exemplo, fluído de líquidos em alta velocidade, pós ou partículas de plásticos transportados pelo ar e outras cargas eletrostáticas para a superfície.

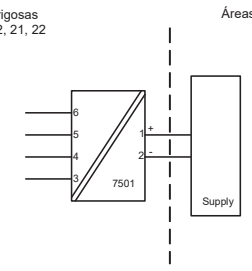
Zona 1, 2, 21, 22

Áreas não perigosas



Terminal: 3,4,5,6
Sensor: RTD ou TC

Terminal: 1,2
Alimentação: 35 VDC

Instalação tb, Ex d:

O transmissor é destinado, quer para ser ligado através de um cabo, ou pode ser montado directamente sobre uma sonda de detecção de temperatura.
Sensores apenas INMETRO certificadas, apropriadas para a aplicação e instalado corretamente, pode ser montado diretamente sobre o transmissor sem certificação adicional da combinação.

Se o transmissor estiver fisicamente conectado a uma possível fonte de calor ou resfriamento, por exemplo, através da montagem de um tubo de processo ou sensor de temperatura, a temperatura no ponto de conexão deve estar entre a faixa de temperatura ambiente dada no certificado. O sensor deve ser adequado para ser usado como entrada de equipamento no equipamento Ex d e nenhum volume deve ser adicionado no enclosure do 7501.

Entradas de cabos não utilizadas devem ser selados pelas elementos de bloqueio 8550-xxx-xxx e 8551 fornecidos com o 7501 ou seladas pelo INMETRO aprovou elementos adequados para a aplicação.

O Sensor / Sonda aplicado deve ser adequado para a aplicação, instalado corretamente, e deve ser certificado pelo INMETRO.

O grau de proteção do IP 54 de acordo com a IEC 60529 é alcançado se o certificado Ex de prensa-cabos ou dispositivos de entrada de conduíte são usados e adequados para a aplicação e instalados corretamente.

O grau de proteção do IP 68 de acordo com a IEC 60529 é apenas alcançado se o certificado Ex de prensa-cabos ou dispositivos de entrada de conduíte são usados e adequados para aplicação e instalados corretamente com selos de vedação ou selante Loctite adicionados para as linhas do sensor, elementos de supressão e prensa-cabos.

A tampa do display deve ser parafusada em todos os pontos e o fecho de segurança deve ser ajustado antes de colocá-lo em serviço. Não abra a tampa do display até 30 minutos depois de desconectar a alimentação a fim de permitir que os capacitores internos descarreguem, ou não abra a tampa do display a menos que a área seja conhecida como segura.

Para uma temperatura ambiente que excede 70 ºC, cabos resistentes a aquecimento e prensa-cabos adequados para pelo menos 90 ºC devem ser usados.

O equipamento deve ser conectado em uma linha potencial correspondente.

Quando a faixa de temperatura do processo excede a faixa de temperatura de serviço ela deve ser verificada através de medições de temperatura no local, levando a pior condição em conta, que a temperatura de serviço não exceda a faixa do módulo.

Cuidado
Cuidados especiais devem ser tomados para evitar o acúmulo de carga eletrostática no equipamento devido ao repetitivo processo de carregamento, por exemplo, fluído de líquidos em alta velocidade, pós ou partículas de plásticos transportados pelo ar e outras cargas eletrostáticas para a superfície.

Nenhuma modificação no equipamento pelo cliente é permitida exceto o que é mencionado no manual ou no desenho de instalação.

DECLARATION OF CONFORMITY

(7501D0C_102)

As manufacturer

PR electronics A/S, Lerbakken 10, DK-8410 Rønde

hereby declares that the following product:

Type: **7501**
Name: **Field mounted HART temperature transmitter**
From serial no: **160808041**

is in conformity with the following directives and standards:

The EMC Directive 2014/30/EU and later amendments

EN 61326-1 : 2013

Immunity test requirements for equipment intended to be used in an industrial electromagnetic environment. For specification of the acceptable EMC performance level, refer to the electrical specifications for the device.

The ATEX Directive 2014/34/EU and later amendments

EN 60079-0 : 2012 + A11 : 2013, EN 60079-1 : 2007, EN 60079-11 : 2012,
EN60079-15 : 2010 and EN60079-31 : 2014
ATEX certificate: DEKRA 15 ATEX 0058 X (7501xxxxxx2)
